In experiments the effects of the latensification were  
reflected to a greater extent when the developing time  
is shorter. This is probably a characteristics of the  
latensification by a solution of metal salts. The effects  
of the latensification are decreased when the develop-  
ing time is prolonged. in the case of latensification by  
metal salts. The reason lies in the fact that the latent

The study was conducted as proof of the effect of  
ammonia in the ammonia-pressurization method.  
First, dicyandiamide was fused into a thin layer at  
213°C in order to avoid the accumulation of reaction  
heat, and by analysing the composition of the reac-  
tion system at regular intervals, the intermediate  
formation of cyanamide, biguanide, cyanomelamine,
